CAD Mini Golf

Design a hole in Onshape. Play it in your browser.

PLAY AT

bmfg.help/golfsim

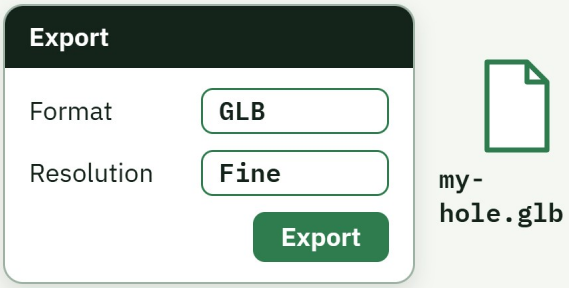

1 Build it in Onshape

YOUR PARTS LIST

`playfield`	the floor
`walls`	keep the ball in
`tee`	where the ball starts
`cup`	sits in a hole cut in the floor
`spinner`	optional: it spins

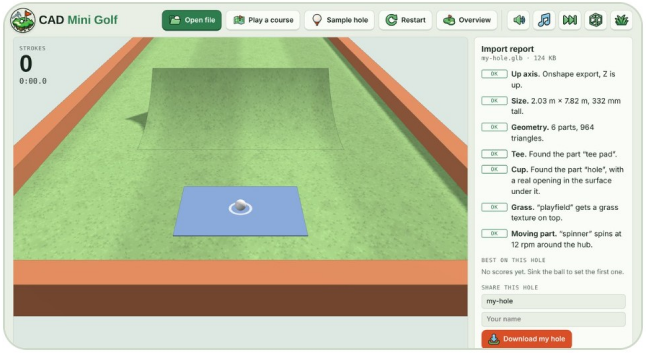

- Build a floor and walls.
- Name two parts **tee** and **cup**. Spelling matters!
- Want motion? Add a part named **spinner** or **slider**.

2 Export a GLB file

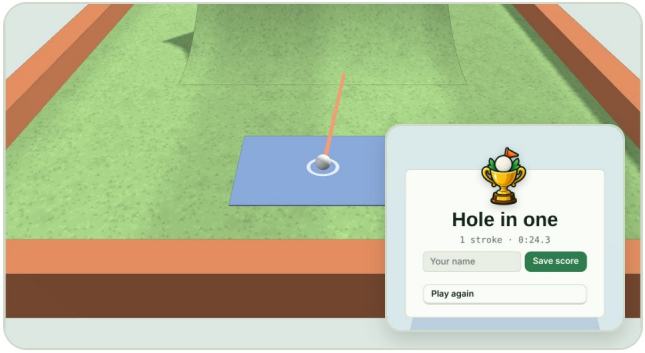

- Right-click the **Part Studio** tab, then **Export**.
- Pick **GLB** and **Fine**. Click Export.
- Save the **.glb** file where you can find it.

3 Load it in the app

- Go to **bmfg.help/golfsim**.
- Click **Open file** or drag your .glb in.
- Check the **Import report**. All **OK**? You're set.

4 Play!

- **Drag back** from the ball. Let go to putt.
- Farther drag = harder hit.
- Sink it, type your name, **Save score**.

5 Turn it in

Click **Download my hole**. Hand in the **.golfhole** file.

Need ideas?

Click **Sample hole** for a new random hole. A red line in the report? Rename the part and export again.

Teachers

Drop the files into `golfsim/builder.html` to make a class course.
